Episode 002 selected AI forecast: Gen.G 66.5%, BLG 33.5%

The episode point estimate is finalized at Gen.G 66.5% and BLG 33.5%. The targeted optimization retains the numerical estimate and adds fresh fact checking, calibration diagnostics and more accurate explanation.

Conditional on normal completion of the specified BO5 with one official champion. Cancellation, unresolved status or no official champion does not automatically count as either team's loss. Match-data cutoff remains 2026-11-09T13:00:34Z, with the latest included source date November 8. Official review cutoff is 2026-11-10T06:04:34Z. Frozen at 2026-11-10T06:09:44.366004+00:00. The review date is not a new match-data cutoff.

Work completed

A fresh official schedule contains 39 complete main-event results; the finalists still have 12 series and 26 maps, matching the original model. No new focal match result was found. The pairing remains GEN–BLG, BO5, patch26.20. The official broadcast starts at 03:00 Beijing time on November15; exact Game1 start is not verified. Both downloaded rules PDFs are byte-identical to the November9 copies; this does not exclude separately communicated emergency notices.

The official TLAW–BLG timestamp is October25 at00:00 UTC, which is October24 in New York and at the event venue. This is compatible with GoL's October24 calendar date. The full provider timezone remains unverified; no isolated row was changed.

A declared diagnostic of the fixed239 historical forecasts used2000 whole-event bootstrap draws. The full-sample blend slope is0.769, suggesting possible overconfidence. The international46-series subset has only5 event blocks and a slope of1.189, with substantial uncertainty. No defensible universal target shrinkage amount is established. Family error correlation is0.982; the models are not independent evidence, and stable blending gains are not established. See reviews/.

No confirmed numerical defect requires repair. The2026 diagnostics did not change configurations, weights or calibration. The forecast was not changed merely to produce a different number.

Construction

The model uses3432 series and8157 maps from2024–2026, with opponent-strength adjustment. Configurations and symmetric calibration use211 chronological2025 BO5 forecasts; equal weights are fixed. Completed2026 results update strengths, while2026 evaluation does not retune selection or weights.

Component	Gen.G	BLG
Calibrated Elo	64.38%	35.62%
Calibrated90-day Bradley–Terry	68.63%	31.37%
Fixed50/50 blend	**66.50%**	**33.50%**

The239-series2026 retrospective replay has Brier0.2223 versus0.2500 for always50/50; the46 international main-event series have0.2047. These are retrospective results, not a season-long prospective record or proof of target calibration or market superiority. Calculations are copied under model/; original source bodies and internal sessions remain local; public links and reading scope are in sources.csv.

Evidence and counterevidence

GEN is5–0 in series and10–1 in maps at Worlds, with three recent domestic BO5 wins and9–2 maps. BLG is5–2 and11–4 at Worlds, with2–1 series and7–4 maps domestically. Opponents are modeled; raw records are not treated as equal-difficulty trials or additional independent updates.

BLG's3–0 over DK and3–1 over T1, plus its First Stand title, are the strongest countercase. GEN faced LYON and IG in knockouts and only3 distinct teams overall. Official GPR remains nearly level, BLG1611 and GEN1610; it is a rating, not an official final win probability. Rechecking it did not add weight.

Status and video

The episode point estimate is selected. Native full review remains insufficient_evidence and fullResearchChecksPassed=false. Current Fearless Game5/reset details, comprehensive emergency-notice coverage, final submitted starters and health, historical availability and target calibration remain limited. The original14 native calls were verified as gpt-6.1-sol/high. This revision is a targeted review, not a newly completed native full review.

The video follows evidence, calculation, retrospective check, countercase, selected probabilities, then a timestamped Polymarket comparison. Freeze precedes obtaining this revision's market quote. Prior coordinator exposure remains disclosed; this is not a pristine blind test. Market disagreement does not prove either side correct.

Post-freeze market snapshot

The AI file was locally frozen at2026-11-10T06:09:44Z. At06:11:55Z, Polymarket whole-match Match Winner market6889027 had GEN best bid/ask0.62/0.63 (mid62.5%) and BLG0.37/0.38 (mid37.5%). Both books and Gamma agree without normalization. The displayed AI66.5/33.5 differs by plus/minus4.0percentage points.

Source: https://polymarket.com/event/lol-blg-gen-2026-11-14 . This is whole-match moneyline, not game or handicap. Cancellation/tie pays50/50; the rescheduled-start deadline is November28 at23:59ET, subject to the announced-reschedule clause. Forfeit and source rules also differ. Winner equivalence is limited to normal completion inside that window; this is not an exact same-conditioned probability difference.

Public JSON omits local predictionFile paths; original/public hashes are mapped in public-export.json. The frozen estimate itself is unchanged. The historical quote did not retune the model or prove superiority and is not live. Actual GitHub publication must be checked separately from local freeze time.

See market/comparison-audit.json and market/scope-clarification.en.md. Raw token midpoints and books are included; complete contract text, HTML and event-response bodies are not redistributed.
